

ZUMRO

AIR SHELTER SYSTEMS

RIGID DOOR SYSTEM

A rigid door option may be zippered into any ZUMRO shelter, in place of the roll-up man-doors. This option is especially useful during longer term deployments, where a conventional door is more desirable and efficient for shelter access than the roll-up configuration. Rigid door installation is easily accomplished by unzipping and removing the shelter connector panel, and zipping the attached rigid door panel into its place.
